PROJECT OVERVIEW

=====

Project Name:

Pramod

Client Name:

yash

Client Email:

yash@gmail.com

Company:

yash

=====

REQUIREMENTS ANALYSIS

=====

Functional Requirements:

Users shall be able to view temple home page content.

Users shall be able to view information about the temple.

Users shall be able to view a photo gallery.

Users shall be able to view Darshan & Aarti schedules.

Users shall be able to view events & festivals.

Users shall be able to make online donations.

Users shall be able to book poojas through a dedicated system.

Users shall be able to view news & announcements.

Users shall be able to access contact information for the temple.
Administrators shall be able to manage website content via an admin panel.

Non Functional Requirements:

The website shall implement SSL for secure communication.
The website shall support user authentication and role management.
The website shall include data validation.
The website shall have backup mechanisms.
The website shall be SEO optimized and mobile responsive.

Technologies:

React.js
Tailwind CSS
Node.js
Express.js
MongoDB
JWT
Cloudinary
Razorpay

Scope:

A modern temple website providing information, events, donations, pooja booking, gallery, announcements, and administration features, serving as a complete digital platform for devotees to access temple information, book poojas, make donations, view events and stay connected with temple activities.

BUSINESS ANALYSIS

Project Type:

Temple Digital Platform

Complexity:

Medium

Major Modules:

Public Website (Content & Information)

Donation System
Pooja Booking System
Administration Panel
User Management

Key Features:

Content Display (Home, Info, Gallery, Schedules, Events, News, Contact)
Online Donation Processing
Pooja Booking Management
Administrator Content Management
User Authentication & Role Management
Secure Communication (SSL)

Dependencies:

Payment Gateway (Razorpay)
Cloud Media Storage (Cloudinary)
SSL Certificate Provider

Assumptions:

All temple content (text, images, schedules, event details) will be provided.
Specific details for pooja offerings and donation categories will be provided.
Initial administrator user credentials will be configured for platform management.

=====

RISK ANALYSIS

=====

Technical Risks:

Integrating the payment gateway (Razorpay) and cloud media storage (Cloudinary) may encounter unforeseen technical complexities.
Implementing robust user authentication and role management across the entire platform could be technically challenging.
Developing the dedicated Pooja Booking System with its specific functional requirements might present unexpected technical hurdles.

Resource Risks:

Temple staff may not provide all required content, images, schedules, and details for poojas and donations in a timely manner.

The development team might lack sufficient expertise in specific technologies like MongoDB, JWT, or Razorpay integration.

Timeline Risks:

Delays in receiving comprehensive content and specific details from the temple for pooja offerings and donation categories could extend the project timeline.

Unforeseen technical issues during the integration of external dependencies like Razorpay or Cloudinary could cause project delays.

Security Risks:

Improper implementation of SSL or user authentication mechanisms could lead to vulnerabilities or unauthorized access.

Security flaws in the online donation or pooja booking systems could expose sensitive user data or financial transaction details.

Mitigation Strategies:

Conduct early proof-of-concept integrations for Razorpay and Cloudinary to identify and resolve potential technical challenges.

Establish clear content delivery schedules with the temple, providing templates and guidance for required information.

Prioritize comprehensive security testing, including vulnerability assessments, for the donation and pooja booking systems.

Ensure the development team has adequate training or experience with all specified technologies, particularly JWT and MongoDB.

Implement robust data validation at all input points across the website, donation, and pooja booking systems.

COST ESTIMATION

Complexity:

Medium

Team Size:

3 developers

Duration:

10 weeks

Estimated Cost:

\$90,000

Development Effort:

30 person-weeks

Recommendations:

Establish clear content delivery schedules with the temple, providing templates and guidance for required information, to mitigate timeline risks.

Conduct early proof-of-concept integrations for Razorpay and Cloudinary to identify and resolve potential technical challenges before full implementation.

Prioritize comprehensive security testing, including vulnerability assessments, for the online donation and pooja booking systems, due to handling sensitive data.
